MISO Generator App

The MISO Generator App lets you see at a glance your Midori MISO generator's battery status, current and past power usage, and options for scheduling or allocating power whenever and wherever you need it. This app offers the same powerful features and options as the MISO generator website (MISO.app), now in the convenience of your pocket. You'll never have to worry if you left the lights or oven on again.

What's new in version 1.1

What's New

- We added a new feature: Alerts!🔔 You can now set up custom notifications to be sent to your smartphone when power usage nears an amount you specify. Here are some examples:
    - When your power bank nears 25%
    - When a linked appliance exceeds 1000 Watts
    - When a power outage occurs

  Also check out the Setting Up Alerts page in the documentation and our blog post for a detailed walkthrough. (Thanks for your feedback, Jerome and Sandy!)
- Historical usage now goes back to the first time your generator switched on instead of just six months. The Usage History page also now lets you view usage as line graphs or bar charts, not just pies.

Bug Fixes

- Patched an issue where users using Single Sign-On saw the confirmation message twice.
- Patched an issue where users using Single Sign-On saw the confirmation message twice.
- The download reports feature no longer misbehaves and stays stuck to the top of your screen weirdly. Feel free to do other things on your phone while your report downloads.
- We fixed a bunch of rare, random bugs that caused the app to crash. More are likely crawling around somewhere, and as soon as we know where they are, we'll get them, too. (Found a bug? Report it here.)
